

Model CG-310

Chemical Grounding System - Specifications

System Contains: Type K copper pipe with 0.83" thick walls, 3.125" O.D., 10 foot length
Copper pipe includes non-hazardous metallic salts which permit recharging.
Plastic protective box and lid - green, high density, polyethylene with flanged base.
Backfill material

Backfill Material Description:

NSF certification (Certified to NSF/ANSI standard 60). Positive low resistance, electrical connection to the earth.
Compatible with all copper grounding systems. Does not contain any hazardous chemicals.
Will not leech into the ground. Does not require recharging. Not electrically conductive. Environmentally friendly.
Provides a stable, permanent ground for the life of the grounding system.
Contains a corrosion inhibitor to protect copper. Will not expand or experience any shrinkage.
